

Adding Data Objects to the Report.

Expand the **Data** folder.

The objects within the folder are the same ones from Query Studio.

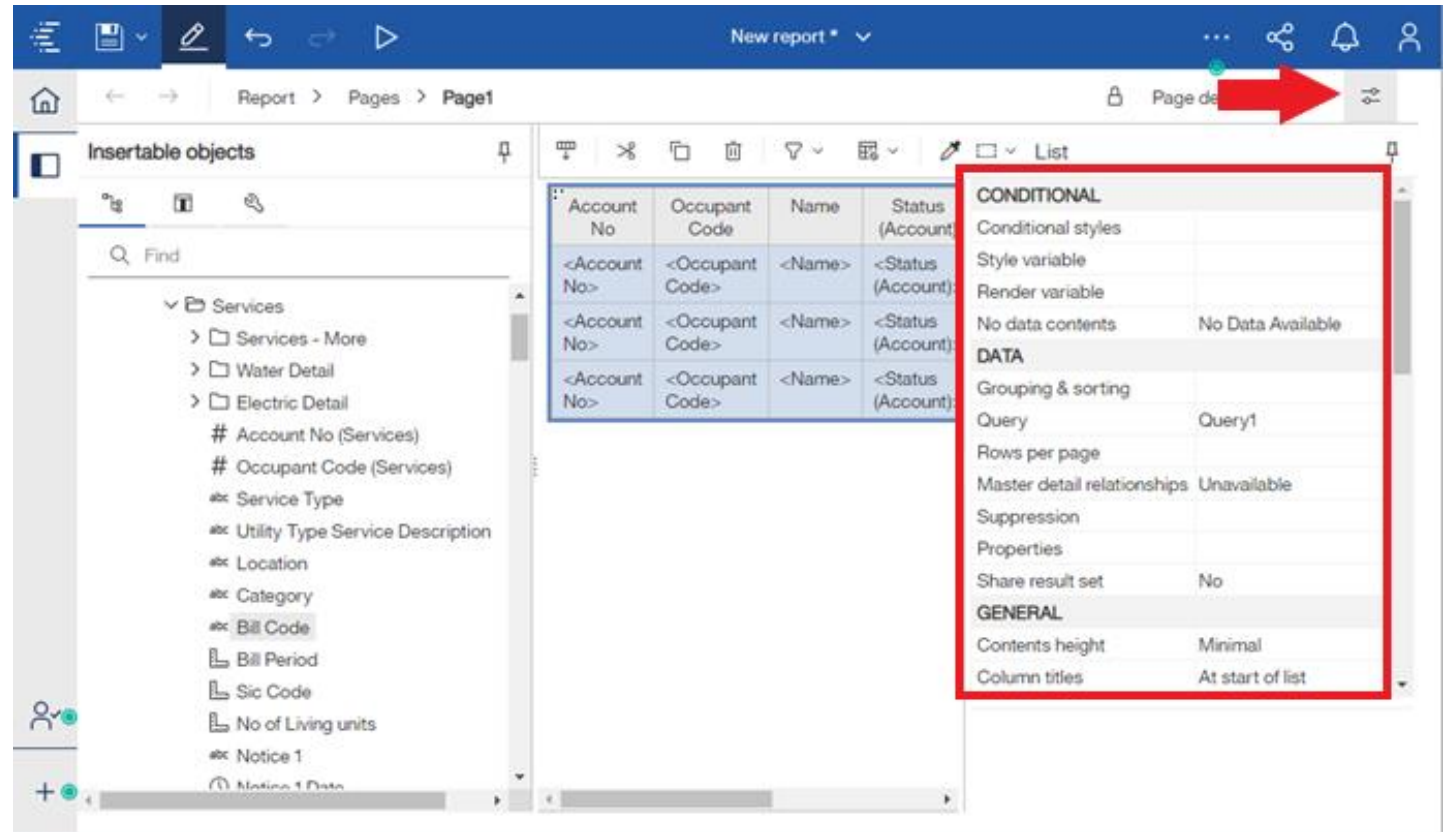

Double-click or Drag-and-Drop objects into the list to build the report.

The upper right corner of the report contains a **properties** icon.

Click the icon to show or hide report properties.

Note: Generally, for report building, hide the properties to see more of the columns in the report.

Report properties are now hidden.
