

# NEW CONSTRUCTION DESIGN ASSISTANCE

## SMARTER ENERGY DECISIONS START DURING DESIGN

Planning a new building, addition, or major renovation is the best time to make energy decisions that affect long-term operating costs, system performance, and reliability. The New Construction Design Assistance program helps facilities plan efficient electric systems from the start.

### How We Help

- Enroll in Focus on Energy programs for rebates and design support based on project type, phase, and size
- Review plans, coordinate with design teams, and identify energy saving opportunities
- Offer bonus rebates to help cover the added cost of installing electric energy-saving upgrades

### Who It's For

Commercial, industrial, school, government, and multifamily (4+ units) properties undergoing new construction, expansion, or major renovation. Major renovations must include a change of occupancy classification or affect at least two building systems (ex. building envelope, HVAC, lighting).

### Get Started

Contact your Program Administrator to apply or learn whether the New Construction Design Assistance program is a good fit for your project:
